# Know Your Must Have Weather Station Tools

Meteorologists use tools to help them be as accurate as possible when it comes to predicting the weather. In our weather journals, we will use our **observation skills** to record what kind of weather we see.

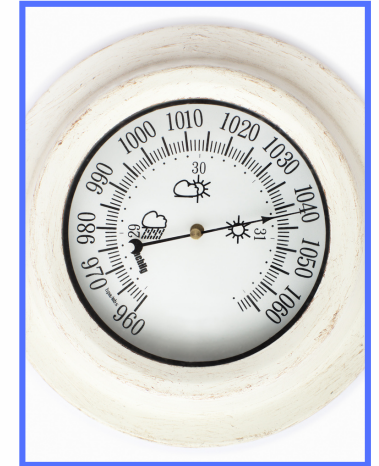

THIS JOURNAL  
BELONGS TO

---

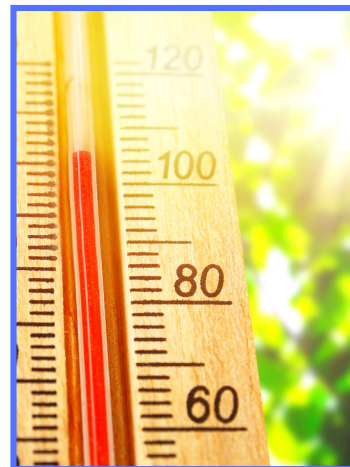

---

A rain gauge measures liquid precipitation across a certain range. Rain gauges vary depending on the diameter of the funnel.

A barometer is an instrument used to measure atmospheric pressure. In order to predict the weather and determine altitude.

A thermometer is a device that measures air temperature.

An anemometer is an instrument used to determine wind speed and direction.
